

Accelerate mission outcomes with trustworthy AI.

3x

More accurate

Model responses when aligned using SeekrFlow™.

90%

Lower costs

To prepare training data vs. traditional approaches.

30

Minutes or less

To build a production-grade LLM, ready to validate and deploy.

3x

Price-performance

In Intel® Tiber™ Developer Cloud vs. contemporaries.

Agency Modernization Demands AI Innovation

Modernizing your agency to accelerate the mission demands AI-driven innovation. However, commercial AI and GenAI are inaccurate, unsafe and opaque. Seekr helps you quickly modernize and drive mission outcomes with safe, efficient and trustworthy AI. We address the AI adoption challenges holding your agency back:

- ⚠️ **Untrustworthy results:** LLMs produce plausible but incorrect responses (called hallucinations), based on probabilities and internet data, not facts grounded in domain-specific data.
- ⚠️ **Inflexibility and low ROI:** LLMs are not configurable, lose context over long conversations due to token limits, and cannot be easily fine-tuned with agency data, limiting AI's value.
- ⚠️ **Inaccessible data:** Agencies cannot afford to manually label all data and data in different formats is often inaccessible, limiting LLM relevance and mission impact.
- ⚠️ **High complexity:** Manually managing AI infrastructure, data, model deployment, and bias correction with a skills shortage hinders safe and efficient AI implementation at scale.

Real Use Cases. Real Mission Impact.

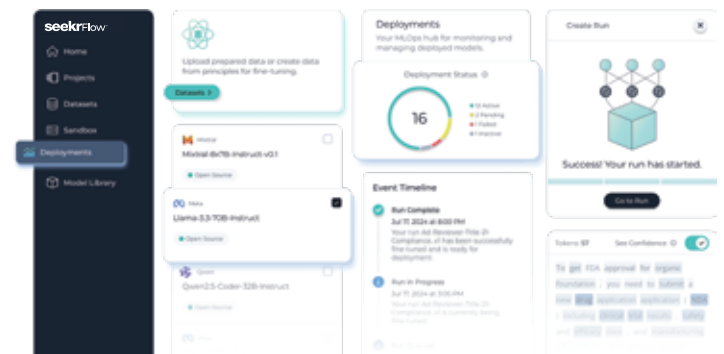

- Supply Chain Risk Management
- Entity Vetting and Insider Threat Detection
- Document Redaction and FOIA
- Defensive and Offensive Cybersecurity
- Data Enrichment
- RAG on Document Collections
- Model Fine-Tuning

About Seekr

Seekr is a privately held AI technology company founded in 2021 to deliver safe, trustworthy, and mission-capable AI and GenAI to the DoD. Seekr allows your organization to develop, deploy, and monitor trusted LLMs specific to your mission, powered by your data. The company was named one of Fast Company's "Most Innovative Companies" of 2024.

SeekrFlow™

SeekrFlow is the most efficient way to build, operate, and monitor AI applications like LLMs-powered by your data, on any infrastructure.

The Seekr Difference

- ✔️ **Patented accuracy and flexibility:** Take any foundation model (open source or proprietary) and your data, and leverage Agentic AI, RAG and RAFT techniques to increase accuracy by 3x and relevance by 6x.
- ✔️ **Customize any model:** Ensure LLMs are tuned to behave according to your agency's rules and requirements.
- ✔️ **Detect bias and errors:** Train foundation models on an unrivaled collection of vetted information to reduce bias and hallucinations.
- ✔️ **Explain and contest models:** Understand model results using confidence scores and contest results with human-in-the-loop.

How to Buy

The SeekrFlow platform is available in the DoD Tradewinds Marketplace, direct from seekr.com/government, and through our partners Carasoft and Impres Technology.
